

CSCI 1301 – Assignment 3

Bank Accounts

1. Given the following UML diagram on the variety of bank accounts:

2. Create the above classes with appropriate inheritance and polymorphism (method overriding and method overloading).
3. The Saving Account requirements:
- The **Saving Account** yields a profit based on the annual interest given by the bank (**0.25%**).
 - The **monthlyInterestDeposit()** method will deposit the profit yields on monthly basis based on the remaining balance.
 - The **withdraw()** method will deduct the remaining balance of the account.
4. The Checking Account requirements:
- The **Checking Account** allows account holder to issue a check with any amount that is less than the account balance.
 - If the issuance amount is exceeded the account balance (overdrawn), a **overdraft fee (RM 10)** will be imposed to the checking account (automatically deducted to the account balance).
 - The **withdraw()** method will deduct the remaining balance of the account.
5. Refer to the below examples for input and output.
- 6.

Bank Account
1. Saving
2. Checking
3. Exit

Bank Account

1. Saving
2. Checking
3. Exit

Choose your option: 1

1. Deposit
2. Balance
3. Withdraw
4. Return

Bank Account

1. Saving
2. Checking
3. Exit

Choose your option: 1

1. Deposit
2. Balance
3. Withdraw
4. Return

Choose your option: 1

Amount: RM 1000.00

Choose your option: 2

Balance: RM 1000.20

Choose your option: 3

Amount: RM 500.00

CSCI 1301 – Assignment 3

Choose your option: 2

Balance: RM 500.20

Choose your option: 4

1. Saving
2. Checking
3. Exit

Choose your option: 3

Bank Account

1. Saving
2. Checking
3. Exit

Choose your option: 2

1. Deposit
2. Balance
3. Withdraw
4. Return

Choose your option: 2

Balance: RM 500.20

Choose your option: 3

Amount: RM 600.00

Choose your option: 2

Balance: RM -109.80

Note:

Use ***extend*** and ***super*** keywords to access parent class Account to perform the above operations.
